  - c. TechLead
  - d. Coding Bullet
- 5) Email Newsletters
  - a. Morning Brew
  - b. ATOM Finance
  - c. Deeplearning.ai
  - d. FIRE (foundation for individual rights in education)

Are the original 15 sources I followed. I have narrowed it down to 5. From that list I will be following:

1. @squatuniversity
2. Stack Overflow
3. Peter Schiff Show
4. TechLead
5. Morning Brew

For the rest of the semester.

1. I do not use Twitter so instead I will replace that with Instagram. A hobby of mine is fitness and bodybuilding so I spend much time in the gym and learning about fitness. I like squat university because his videos are backed with evidence and short. I can digest the advice he gives and apply it to my training.
2. Stack Overflow is going to be a good friend this semester. I am in my CIS capstone which involves a full stack system design and implementation so I will be using stack overflow constantly.
3. Peter Schiff Show is a podcast that I enjoy because he provides a nuanced perspective on the economy and politics. Peter Schiff has insight on the economy that I find to be interesting. Not many people share his views, and myself being slightly contrarian I tend to agree with him.
4. TechLead is a YouTube channel ran by a prominent software developer. He is a former TechLead at Google and Facebook, so he is very experienced. I worked as a developer over the summer which is what initially sparked my interest. I have been trying to learn how developers think, so

this channel provides me with that perspective. His videos are often more conceptual and not based on coding examples.

5. Morning Brew is a newsletter that is sent out every morning. Morning Brew provides current events that usually touch on heavily on economics and politics which I enjoy. There are also more interesting sections included daily.
